Evidence and intervention proposal

Committee review draft | Operational hold

Prepared 26 October 2026, 06:32 WAT

map hospitals and health facilities, assess road access and capacity evidence, and produce a committee proposal and GIS pack for evaluator review and revisions Area: Bamenda–Bambili corridor

This pack records the current evidence, recommended verification and intervention priorities, and the conditions that must be satisfied before an operational decision. Demonstration reports and synthetic resources do not establish actual field conditions.

Proposed roles and named counterparties in the draft are suggestions requiring committee confirmation. Their presence, participation and appointment have not been verified; confirm an actual responsible person before assigning work.

Evidence revision: 3ec0df7a1183b78c457b83d7089cad1e2e9c08f3b57806682715860701a017b0

Situation summary

The operator objective is to map hospitals and health facilities, assess road access and capacity evidence, and produce a committee proposal and GIS pack for evaluator review and revisions for the Bamenda–Bambili corridor [15]. The acquired map extent covers 5,100 road features, 7 mapped health features, 16 named settlement candidates, 3 reported-access observations retained in the reported-access layer, and 0 intervention zones [20][39]. Duplicate settlement names (Balewa, Bambili) retain multiple coordinate candidates; local clarification is required [6][40][4][29]. Operational dispatch remains HOLD pending resolution of all evidence gaps [29].

Findings

Seven mapped health features are classified as mapped_point_not_verified_entrance or source_boundary_vertex_not_verified_entrance with no capacity, operating hours, services or current availability provided: examples include Bamenda Regional Hospital and School's Hospital [21][36][10][42][13][18][22]. Mapped health features are not an exhaustive hospital inventory [29]. Three reported-access observations with submitted coordinate references are retained in the reported-access layer; they remain unverified, may be demonstrations and do not establish actual incident locations [29][39]. Two other access records lack usable coordinates or accepted narrative support and are excluded; exclusion never establishes road clearance [29]. No road is certified open or impassable; 0 verified blockages exist [29][39]. Text interpretation of 8 reports yields 6 claims (1 denied road blockage, 1 uncertain service status, 4 example assertions) and 0 source-checked claims confirming actual incidents [11][27]. Registered stock and fleet are synthetic with expired observations; they do not establish actual NGO resources [3][29]. Cargo quantities, beneficiary requirements, dispatch resources, deadlines and an authorized operator decision are absent [29].

Recommended interventions

Action 1 | Facility verification — Confirm capacity, operating hours, services and current availability for all 7 mapped health features through direct contact

Responsible role: Health Facility Liaison Officer

Acceptance condition (decision gate): Gate 1: Direct confirmation of capacity, operating hours and services for all mapped health features

Source: [21][36][10][42][13][18][22][29]

Action 2 | Road access assessment — Field verification of road passability and exact incident locations for priority segments

Responsible role: Road Access Field Team Lead

Acceptance condition (decision gate): Gate 2: Field-verified status for priority road segments; no road currently certified open or impassable

Source: [29][39]

Action 3 | Settlement disambiguation — Resolve duplicate settlement names (Balewa, Bambili) with local authorities to establish unique coordinate references

Responsible role: Community Coordination Officer

Acceptance condition (decision gate): Gate 3: Unique coordinate references for duplicate names (Balewa, Bambili) confirmed locally

Source: [6][40][4][29]

Action 4 | Resource confirmation — Replace expired synthetic stock and fleet observations with current warehouse and fleet confirmation from the operator

Responsible role: Logistics Resource Officer

Acceptance condition (decision gate): Gate 4: Current warehouse and fleet confirmation replacing expired synthetic observations

Source: [3][29]

Action 5 | Operator inputs — Obtain cargo quantities, beneficiary requirements, dispatch resources, mission deadline and authorized operator decision

Responsible role: Mission Planning Coordinator

Acceptance condition (decision gate): Gate 5: Cargo quantities, beneficiary requirements, dispatch resources, deadline and authorized decision supplied (operator must provide the mission deadline; planner cannot invent a calendar date)

Source: [29]

Action 6 | Intervention zone definition — Establish surveyed delivery zones or approved boundaries for the corridor

Responsible role: GIS/Planning Officer

Acceptance condition (decision gate): Gate 6: Surveyed intervention boundaries or approved delivery zones supplied; intervention_zones layer is intentionally empty

Source: [29][39]

Risks

• All facility entrances unverified; capacity, hours, services and availability unknown [21][36][10][42][13][18][22][29].

• Road passability uncertified; reported-access points are unverified and may be demonstrations [29][39].

• No surveyed intervention boundaries or approved delivery zones [29][39].

• Registered stock and fleet are synthetic with expired observations; do not establish actual NGO resources [3][29].

• Cargo quantities, beneficiary requirements, dispatch resources, deadlines and authorized operator decision absent [29].

• Duplicate settlement names (Balewa, Bambili) retain multiple coordinate candidates [6][40][4][29].

• Demonstration reports cannot corroborate actual incidents [29][44][32][23][45][30][17].

Next steps

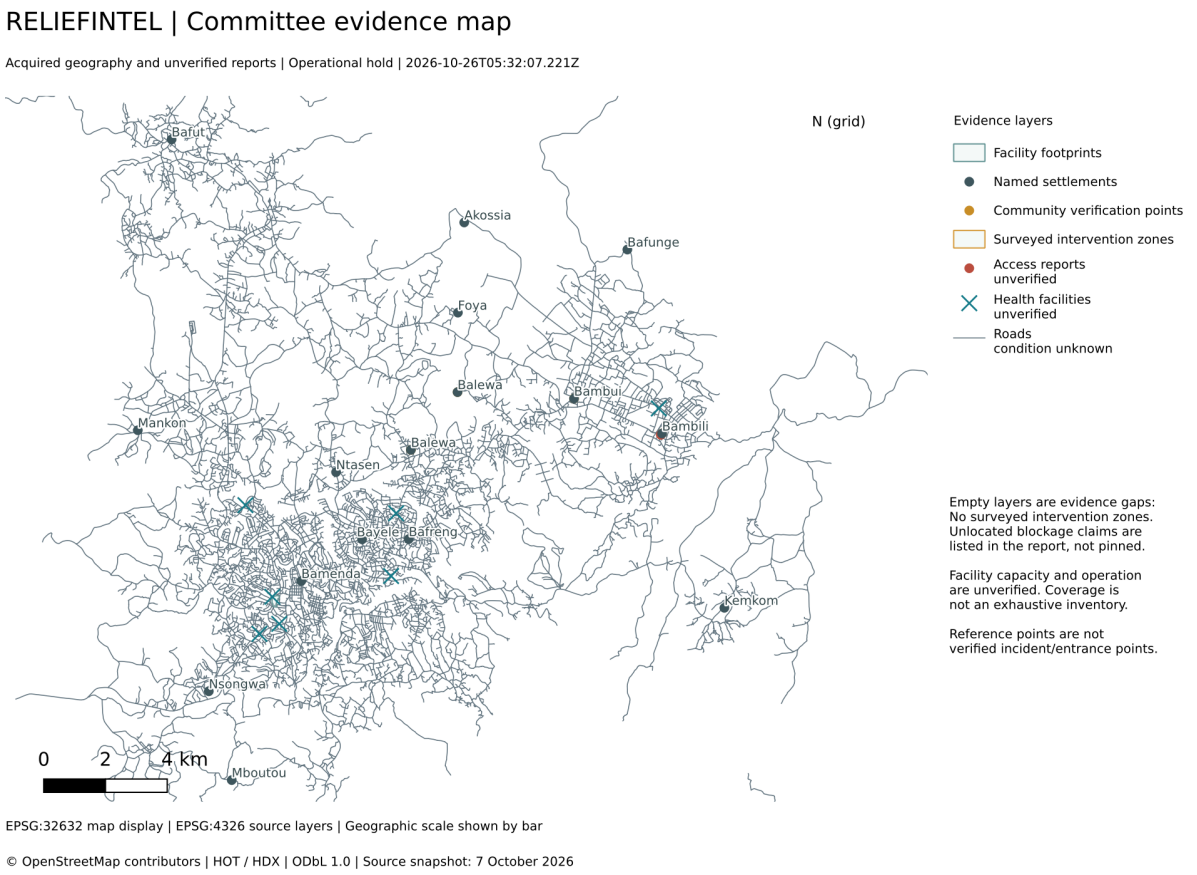

Operational dispatch remains HOLD pending resolution of all evidence gaps [29]. Gates 1–6 above must be satisfied before any executable delivery planning. The Mission Planning Coordinator must obtain the mission deadline from the operator; the planner cannot invent a calendar date [29]. This report is a committee review draft, not an approved dispatch order.

Evidence trail

Mission objective [15]; map extent and coverage [20]; facility records [21][36][10][42][13][18][22]; settlement references [33]–[8]; text-interpretation inventory [11]; community/resource context [34]; required evidence gaps [29]; evidence layer inventory [39]; demonstration reports [44][26][31][32][23][45][30][17]; report interpretations [37][43][14][2][41][28][27].

Mapped evidence and coverage

Native QGIS rendering. The scale bar applies to this reproduced map; the full-resolution map PDF and editable QGIS project are included in the pack.

Road geometry indicates mapped existence. It does not establish present passability. Blockage points require report coordinates; no point is invented for an unlocated claim. Intervention candidates are community references, not surveyed zones.

Required evidence gaps

• Report text interpretation: 8 accepted source-span checks; 0 held, failed or budget-limited readings; 0 empty readings require manual interpretation. Private report text is processed only with authorization bound to the project and configured provider. Private quotes and place/time mentions are withheld from shared outputs. A checked quote is not semantic or field verification; text denial/absence of an incident never certifies a road open.

• Facility capacity, operating hours, services and current availability require direct confirmation; mapped health features are not an exhaustive hospital inventory.

• Current road passability, exact incident locations and affected road segments are unverified. No road is certified open or impassable by this map.

• Location handling: 3 reported access observations have submitted coordinate references and are retained in the reported-access layer; 2 other access records lack usable coordinates or accepted narrative support and are excluded. Retained points remain unverified, may be demonstrations and do not establish actual incident locations. Exclusion never establishes road clearance.

• No surveyed intervention boundaries or approved delivery zones were supplied; the intervention_zones polygon layer is intentionally empty.

• Cargo quantities, beneficiary requirements, dispatch resources, deadlines and an authorized operator decision must be supplied before executable delivery planning.

• Demonstration reports cannot corroborate an actual incident.

• Registered stock and fleet are synthetic; their values do not establish actual NGO resources.

• Registered resource observations have expired and require a current warehouse/fleet confirmation.

• Duplicate settlement names retain multiple coordinate candidates; local clarification is required.

• signal-aa2b0db56ad1f220b5264f56c93b9fd1: reported road blockage has no usable incident coordinate; it is excluded from the blockage point layer.

• signal-a11dc3d2b05e0de15bc54f44e31da926: form category indicates access constraints, but no accepted affirmative or uncertain text claim supports it. The record is excluded from the blockage point layer; this does not establish road clearance.

Health facility reference inventory

Coordinates are WGS84 (EPSG:4326). Polygon-derived coordinates are an existing boundary vertex, not a centroid, entrance or ambulance access point. Capacity and operation remain unverified.

Mapped health feature / source	Type	Latitude	Longitude	Capacity
School's Hospital [21] Mapped point	hospital	6.0116737	10.2563897	Not reported
Doctor Azang [36] Mapped point	doctor	5.9836417	10.135345	Not reported
St Louis Clinic [10] Mapped point	clinic	5.9811709	10.1794409	Not reported
Unnamed health feature way/685675038 [42] Boundary reference	Health feature; source tag yes	5.9628119	10.1779329	Not reported
Bamenda Regional Hospital [13] Boundary reference	hospital	5.9568214	10.1431576	Not reported
Mezam Clinic [18] Mapped point	dentist	5.948886	10.1451702	Not reported
Bamenda Polyclinic [22] Boundary reference	hospital	5.9459746	10.1393738	Not reported

Named community coordinate references

Duplicate names remain separate source features. These coordinates locate mapped communities, not incidents or beneficiary boundaries.

Located access observations

Each row is a reported/unverified observation, not an independently confirmed incident. Demonstration rows are test observations. Coordinates use the submitted reference rounded to approximately 100 metres; no road-segment match or clearance is implied.

Reported access observation / source	Latitude	Longitude	Mode / status
Bambili reported access constraint [23]	6.004	10.257	DEMONSTRATION; unverified
Bambili reported access constraint [45]	6.004	10.257	DEMONSTRATION; unverified
Bambili reported access constraint [30]	6.004	10.257	DEMONSTRATION; unverified

[34] Independently queryable community/resource context

Source ID: Eb9bed3397f

Bounded community/resource query result: 8 reports, 8 demonstration, 0 live-labelled and 4 forwarded. Candidate rows can share ambiguous reports; do not sum them as independent observations. Resource values below are source references, not actual confirmed NGO resources.

Community candidate	Reports demo/live	Stock reference	Fleet reference	Status
Bambili	6 / 0	120 units x 10 kg	2 vehicles	Synthetic; expired
Balewa	1 / 0	No confirmation	No confirmation	unconfirmed
Bambui	1 / 0	No confirmation	No confirmation	unconfirmed
Balewa	1 / 0	No confirmation	No confirmation	unconfirmed

[39] Generated evidence layer inventory

Source ID: Ed68a33067f

Generated layer feature counts: {"roads":5100,"facilities":7,"blockages":3,"intervention_zones":0,"intervention_candidates":4,"places":16,"facility_footprints":3}. Blockage features are reported/unverified access observations, including demonstrations; they are not independently confirmed incidents. Intervention candidates are community references, not surveyed delivery zones.

[44] Bambili · other

Source ID: Ef3a70f7ec7

Demonstration form category other for Bambili; relationship direct; observed 2026-10-25T06:30:28.332Z. Community label matched; the exact incident location and affected road remain unknown. Origin is unverified. A selected form category does not establish an affirmative narrative claim.

Traceable record: signal-06c9a41ec48efa4ae9440353c29e8d45

[45] Bambili · road blockage

Source ID: Efbd6fdb18d

Demonstration form category road blockage for Bambili; relationship forwarded; observed 2026-10-25T19:57:39.984Z. Reporter-supplied GPS is unverified; approximate display does not identify a road segment. Origin is unverified. A selected form category does not establish an affirmative narrative claim.

Traceable record: signal-198ca331daa34059bca41710bc17639f

GIS handoff and symbology

Open mission.qgz to load the styled GeoPackage. Individual GeoJSON layers are also included. Roads are gray; health features teal crosses; reported access constraints red; intervention zones amber; community verification candidates amber points. Empty blockage/zone layers represent missing located evidence, not an all-clear. Source layers use EPSG:4326 and the map display uses EPSG:32632.
