Evidence and intervention proposal

Committee review draft | Operational hold

Prepared 25 October 2026, 16:59 WAT

map hospitals and health facilities, assess road access and capacity evidence, and produce a committee proposal and GIS pack for evaluator review and revisions Area: Bamenda-Bambili corridor

This pack records the current evidence, recommended verification and intervention priorities, and the conditions that must be satisfied before an operational decision. Demonstration reports and synthetic resources do not establish actual field conditions.

Proposed roles and named counterparties in the draft are suggestions requiring committee confirmation. Their presence, participation and appointment have not been verified; confirm an actual responsible person before assigning work.

Evidence revision: eb7369156c103285e5e04c819b799b7432d04d300551783f9754b111ec32c340

Situation summary

The acquired OpenStreetMap/HOT extract (community-map-v1) covers the Bamenda–Bambili corridor at bounds [10.1, 5.9, 10.3, 6.1] EPSG:4326 and contains 5,111 road-related features, 16 named settlement candidates and 7 health features; coverage, current road passability and facility operation are unverified [17]. Sixteen settlement reference points are mapped; none locates an incident or defines an intervention boundary [23][24][10][27][7][8][6][28][5][15][13][1][22][21][3][9]. Duplicate settlement names exist: Balewa appears at two coordinate pairs requiring local clarification [7][5]. The intervention_zones polygon layer is intentionally empty; no surveyed intervention boundaries or approved delivery zones were supplied [30]. Unknown requested areas outside the acquired corridor are coverage gaps. The mission objective is to map hospitals and health facilities, assess road access and capacity evidence, and produce a committee proposal and GIS pack for evaluator review and revisions [19].

Findings

Seven health features are mapped, all with coordinate basis noted as not a verified entrance and no capacity, operating hours, services or current availability provided [18][25][11][29][14][16][20][30]: School's Hospital (hospital) [18], Doctor Azang (doctor) [25], St Louis Clinic (clinic) [11], Unnamed health feature way/685675038 (yes) [29], Bamenda Regional Hospital (hospital) [14], Mezam Clinic (dentist) [16], Bamenda Polyclinic (hospital) [20]. Current road passability, exact incident locations and affected road segments are unverified; no road is certified open or impassable by this map [17][30]. The reported road blockage for Bambili has no usable incident coordinate and is excluded from the blockage point layer [4][30]. Four demonstration reports exist (Bambili other, Bambui other, Balewa other, Bambili road blockage); all are unverified and cannot corroborate actual incidents [2][12][26][4][30]. Registered stock (120 units × 10 kg at Bambili) and fleet (2 vehicles) are synthetic and expired as of 2026-10-24 11:00 UTC; they do not establish actual NGO resources [31][30].

Recommended interventions

Action 1 | Verify facility capacity, operating hours, services and current availability for each of the seven mapped health features

Proposed accountable entity: Mezam Health District (Ministry of Health)

Trigger / Gate: Direct confirmation from facility or health authority

Depends on: —

Unlocks: Operational dispatch; GIS pack facility attributes

Evidence: [18][25][11][29][14][16][20][30]

Action 2 | Ground-truth road passability for each corridor segment and confirm any blockages with coordinates

Proposed accountable entity: Bamenda Logistics Cluster (NGO logistics unit)

Trigger / Gate: Field assessment or trusted local report with usable coordinates

Depends on: 3

Unlocks: Operational dispatch; GIS pack road status layer

Evidence: [17][30]

Action 3 | Resolve duplicate Balewa coordinates through local clarification

Proposed accountable entity: Bambili Council / Community Health Workers

Trigger / Gate: Local stakeholder input delivering a single coordinate pair with source attribution

Depends on: —

Unlocks: Action 2; Action 4

Evidence: [7][5][30]

Action 4 | Define surveyed intervention boundaries and approved delivery zones

Proposed accountable entity: Operations lead (authorized operator)

Trigger / Gate: Written authorization, committee minutes or digital record of authorized operator decision and stakeholder agreement

Depends on: 2, 3

Unlocks: Operational dispatch; GIS pack intervention_zones layer

Evidence: [30]

Action 5 | Confirm current warehouse stock and fleet availability (existing observations expired 2026-10-24 11:00 UTC)

Proposed accountable entity: Bamenda Logistics Cluster (NGO logistics unit)

Trigger / Gate: Current warehouse/fleet confirmation

Depends on: —

Unlocks: Operational dispatch

Evidence: [31][30]

Action 6 | Obtain cargo quantities, beneficiary requirements, dispatch resources, deadlines and authorized operator decision

Proposed accountable entity: Operations lead (authorized operator)

Trigger / Gate: Written authorization, committee minutes or digital record of authorized operator decision

Depends on: 4, 5

Unlocks: Operational dispatch

Evidence: [30]

Action 7 | Treat all demonstration reports as unverified; do not use for operational decisions

Proposed accountable entity: All leads

Trigger / Gate: Evidence review gate

Depends on: —

Unlocks: —

Evidence: [2][12][26][4][30]

Action 8 | Produce evidence-only GIS pack (facility inventory, road network, settlement references, empty blockage point and intervention_zones layers, gap annotations)

Proposed accountable entity: GIS analyst

Trigger / Gate: Immediate — no field verification required

Depends on: —

Unlocks: Evaluator review and revisions

Evidence: [17][19][30]

Sequencing: Critical path — 3 then 2 then 4 then 6. Parallel tracks — 1 and 5 can run concurrently with the critical path. Action 8 is decoupled and deliverable now for evaluator review; operational dispatch remains HOLD until Actions 1–6 are satisfied [30].

Risks

• Facility capacity, operating hours, services and current availability remain unconfirmed; mapped health features are not an exhaustive hospital inventory [30].

• Road passability and incident locations are unverified; no road is certified open or impassable [30].

• No surveyed intervention boundaries or approved delivery zones exist; intervention_zones layer is empty [30].

• Cargo quantities, beneficiary requirements, dispatch resources, deadlines and authorized operator decision are absent [30].

• Demonstration reports cannot corroborate actual incidents; all four reports are unverified [2][12][26][4][30].

• Registered stock and fleet are synthetic and expired; they do not establish actual NGO resources [31][30].

• Duplicate Balewa coordinates require local clarification before use [7][5][30].

Next steps

• Operational dispatch remains HOLD until Actions 1–6 are satisfied and an authorized operator decision (written authorization, committee minutes or digital record) is recorded [30].

• Evidence-only GIS pack (Action 8) is deliverable immediately for evaluator review; operational-use GIS pack requires Actions 1–4 complete [19][30].

• Any use of demonstration reports for operational decisions is prohibited [2][12][26][4][30].

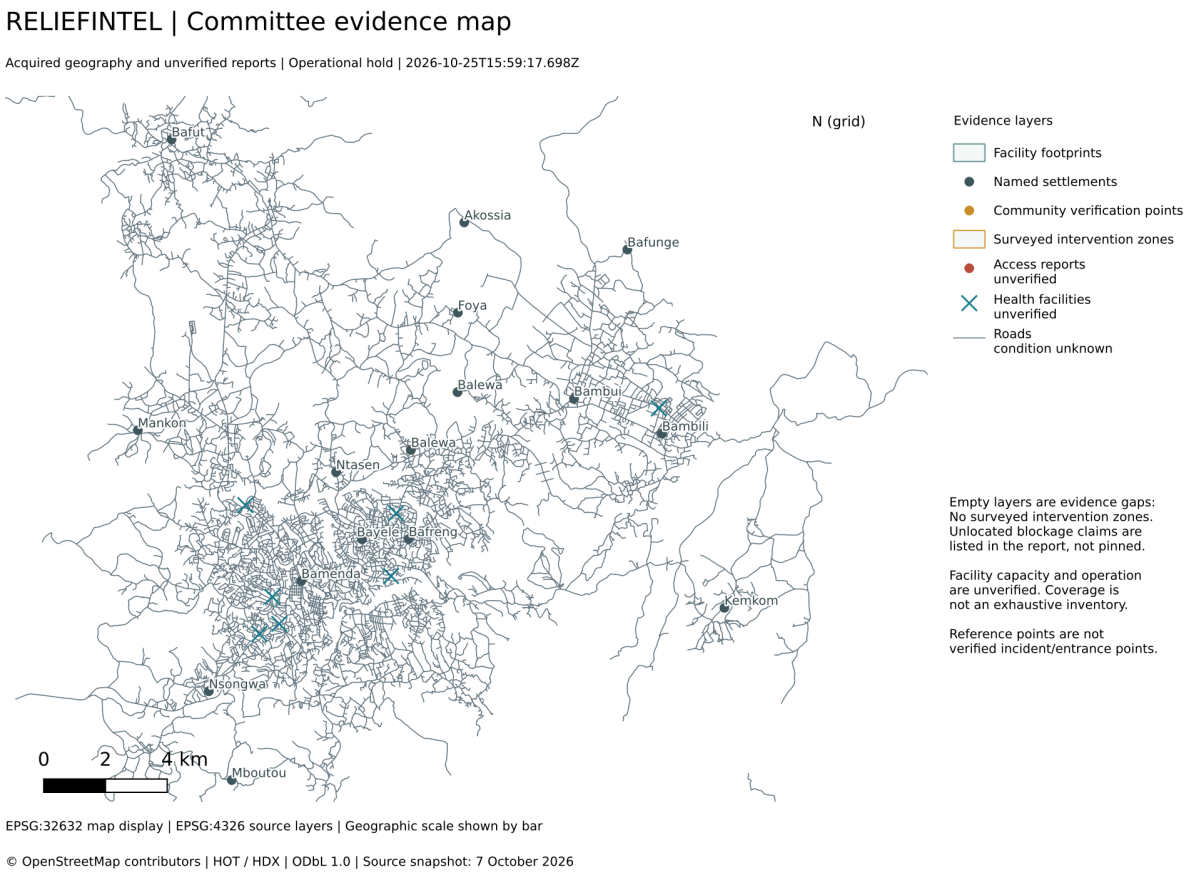

• Evaluator to review this draft and confirm or adjust proposed accountable entities, gate definitions and sequencing before committee endorsement.

Evidence trail

[19] [17] [18] [25] [11] [29] [14] [16] [20] [23] [24] [10] [27] [7] [8] [6] [28] [5] [15] [13] [1] [22] [21] [3] [9] [31] [30] [2] [12] [26] [4]

Mapped evidence and coverage

Native QGIS rendering. The scale bar applies to this reproduced map; the full-resolution map PDF and editable QGIS project are included in the pack.

Road geometry indicates mapped existence. It does not establish present passability. Blockage points require report coordinates; no point is invented for an unlocated claim. Intervention candidates are community references, not surveyed zones.

Required evidence gaps

• Facility capacity, operating hours, services and current availability require direct confirmation; mapped health features are not an exhaustive hospital inventory.

• Current road passability, exact incident locations and affected road segments are unverified. No road is certified open or impassable by this map.

• No surveyed intervention boundaries or approved delivery zones were supplied; the intervention_zones polygon layer is intentionally empty.

• Cargo quantities, beneficiary requirements, dispatch resources, deadlines and an authorized operator decision must be supplied before executable delivery planning.

• Demonstration reports cannot corroborate an actual incident.

• Registered stock and fleet are synthetic; their values do not establish actual NGO resources.

• Registered resource observations have expired and require a current warehouse/fleet confirmation.

• Duplicate settlement names retain multiple coordinate candidates; local clarification is required.

• signal-aa2b0db56ad1f220b5264f56c93b9fd1: reported road blockage has no usable incident coordinate; it is excluded from the blockage point layer.

Health facility reference inventory

Coordinates are WGS84 (EPSG:4326). Polygon-derived coordinates are an existing boundary vertex, not a centroid, entrance or ambulance access point. Capacity and operation remain unverified.

Mapped health feature / source	Type	Latitude	Longitude	Capacity
School's Hospital [18] Mapped point	hospital	6.0116737	10.2563897	Not reported
Doctor Azang [25] Mapped point	doctor	5.9836417	10.135345	Not reported
St Louis Clinic [11] Mapped point	clinic	5.9811709	10.1794409	Not reported
Unnamed health feature way/685675038 [29] Boundary reference	Health feature; source tag yes	5.9628119	10.1779329	Not reported
Bamenda Regional Hospital [14] Boundary reference	hospital	5.9568214	10.1431576	Not reported
Mezam Clinic [16] Mapped point	dentist	5.948886	10.1451702	Not reported
Bamenda Polyclinic [20] Boundary reference	hospital	5.9459746	10.1393738	Not reported

Named community coordinate references

Duplicate names remain separate source features. These coordinates locate mapped communities, not incidents or beneficiary boundaries.

[30] Required evidence gaps

Source ID: Eed74370b77

Facility capacity, operating hours, services and current availability require direct confirmation; mapped health features are not an exhaustive hospital inventory. Current road passability, exact incident locations and affected road segments are unverified. No road is certified open or impassable by this map. No surveyed intervention boundaries or approved delivery zones were supplied; the intervention_zones polygon layer is intentionally empty. Cargo quantities, beneficiary requirements, dispatch resources, deadlines and an authorized operator decision must be supplied before executable delivery planning. Demonstration reports cannot corroborate an actual incident. Registered stock and fleet are synthetic; their values do not establish actual NGO resources. Registered resource observations have expired and require a current warehouse/fleet confirmation. Duplicate settlement names retain multiple coordinate candidates; local clarification is required. signal-aa2b0db56ad1f220b5264f56c93b9fd1: reported road blockage has no usable incident coordinate; it is excluded from the blockage point layer.
