Evidence and intervention proposal

Committee review draft | Operational hold

Prepared 25 October 2026, 21:18 WAT

map hospitals and health facilities, assess road access and capacity evidence, and produce a committee proposal and GIS pack for evaluator review and revisions Area: Bamenda-Bambili corridor

This pack records the current evidence, recommended verification and intervention priorities, and the conditions that must be satisfied before an operational decision. Demonstration reports and synthetic resources do not establish actual field conditions.

Proposed roles and named counterparties in the draft are suggestions requiring committee confirmation. Their presence, participation and appointment have not been verified; confirm an actual responsible person before assigning work.

Evidence revision: 9801188968c682f007f0c273c149e2e27f8dbdd801fadf47cfa08e523d2832ce

Why this mission was reviewed again

The previous mission snapshot was superseded after its evidence changed. This pack records a fresh review; field verification and operational hold still apply. [5]

Previous mission: mission-e4b3626d-8442-4e3d-b53f-99f4ab7cfcd4

Changed evidence	Previous snapshot	This snapshot
Demonstration records	6	7
Forwarded records	3	4
Bambili: reported access constraints	3	4
Bambili: report records	4	5
Report records	6	7

The ZIP includes the full dependency record in mission-memory.json and an actual text diff from the previous mission in drafts/. Report counts do not establish independent witnesses or verified incidents.

Situation summary

The operator mission objective is to map hospitals and health facilities, assess road access and capacity evidence, and produce a committee proposal and GIS pack for evaluator review and revisions for the Bamenda–Bambili corridor [23]. The acquired OpenStreetMap/HOT extract (community-map-v1) covers the corridor with 5,111 road-related features, 16 named settlement candidates and 7 health features; coverage, current road passability and facility operation are unverified [20]. The intervention_zones polygon layer is intentionally empty; no surveyed intervention boundaries or approved delivery zones were supplied [24]. Unknown requested areas outside the acquired corridor are coverage gaps [20].

Findings

Seven health features are mapped (e.g., School's Hospital, Bamenda Regional Hospital); all lack capacity, operating hours, services or current availability [21][16][24]. Sixteen settlement reference points are mapped; none locates an incident or defines an intervention boundary [30][35][24]. Duplicate settlement name Balewa appears at two coordinate pairs requiring local clarification [8][6][24]. Current road passability, exact incident locations and affected road segments are unverified; no road is certified open or impassable by this map [20][24]. Three reported access observations have submitted coordinate references and are retained in the reported-access layer; one other lacks usable coordinates and is excluded [24]. Retained points remain unverified and may be demonstrations [24][19][2][14]. Demonstration reports cannot corroborate an actual incident [24][2][14][33][4][10][29][28]. Registered stock (120 units) and fleet (2 vehicles) for Bambili are synthetic with expired observations (2026-10-24 11:00 UTC) requiring current warehouse/fleet confirmation [22][24].

Recommended interventions

Action 1 | Verify facility capacity, operating hours, services and current availability for each of the seven mapped health features via health-district contact and direct facility contact; document non-response as a gap

Accountable: Health-sector lead

Trigger / Gate: Direct confirmation from facility or health authority per feature

Evidence: [21][32][13][36][16][18][25][24]

Action 2a | Ground-truth road passability for corridor segments Bamenda–Bambui and Bambui–Bambili; confirm any blockages with usable coordinates

Accountable: Logistics/engineering lead

Trigger / Gate: Field assessment or trusted local report with usable coordinates per segment

Evidence: [20][24][4][10][29][28]

Action 2b | Obtain segment reporting deadline from the operator

Accountable: Logistics/engineering lead

Trigger / Gate: Operator-supplied deadline

Evidence: [24]

Action 3 | Resolve duplicate Balewa coordinates through local clarification at both coordinate pairs; return a single attributed coordinate

Accountable: Community liaison

Trigger / Gate: Local stakeholder input delivering a single coordinate pair with source attribution

Evidence: [8][6][24]

Action 4 | Define surveyed intervention boundaries and approved delivery zones

Accountable: Operations lead

Trigger / Gate: Authorized operator decision and stakeholder agreement

Evidence: [24]

Action 5 | Confirm current warehouse stock and fleet for Bambili against the expired observation baseline (2026-10-24 11:00 UTC)

Accountable: Logistics lead

Trigger / Gate: Current warehouse/fleet confirmation from operator

Evidence: [22][24]

Action 6a | Obtain operator-supplied cargo quantities, beneficiary requirements and dispatch resources

Accountable: Operations lead

Trigger / Gate: Operator authorization and documented decision

Evidence: [24]

Action 6b | Obtain operator-supplied mission/reporting deadline

Accountable: Operations lead

Trigger / Gate: Operator authorization and documented decision

Evidence: [24]

Risks

• Facility capacity and operating status remain unconfirmed; mapped health features are not an exhaustive hospital inventory [24].

• Current road passability, exact incident locations and affected road segments are unverified; no road is certified open or impassable by this map [24].

• No surveyed intervention boundaries or approved delivery zones were supplied; the intervention_zones polygon layer is intentionally empty [24].

• Cargo quantities, beneficiary requirements, dispatch resources, deadlines and an authorized operator decision must be supplied before executable delivery planning [24].

• Demonstration reports cannot corroborate an actual incident [24].

• Registered stock and fleet are synthetic; their values do not establish actual NGO resources, and registered resource observations have expired and require a current warehouse/fleet confirmation [24].

• Duplicate settlement names retain multiple coordinate candidates; local clarification is required [24].

• Reported road blockage has no usable incident coordinate; it is excluded from the blockage point layer [28].

Next steps

Operational dispatch remains HOLD. The following inputs must be resolved before any executable delivery planning:

• Current warehouse stock and fleet confirmation for Bambili (Action 5) [22][24].

• Operator-supplied cargo quantities, beneficiary requirements, dispatch resources and mission/reporting deadline (Actions 6a, 6b) [24].

• Authorized operator decision and surveyed intervention boundaries (Action 4) [24].

• Verified facility capacity and operating status (Action 1) [21][32][13][36][16][18][25][24].

• Ground-truthed road passability with usable coordinates for blockages (Action 2a) [20][24][4][10][29][28].

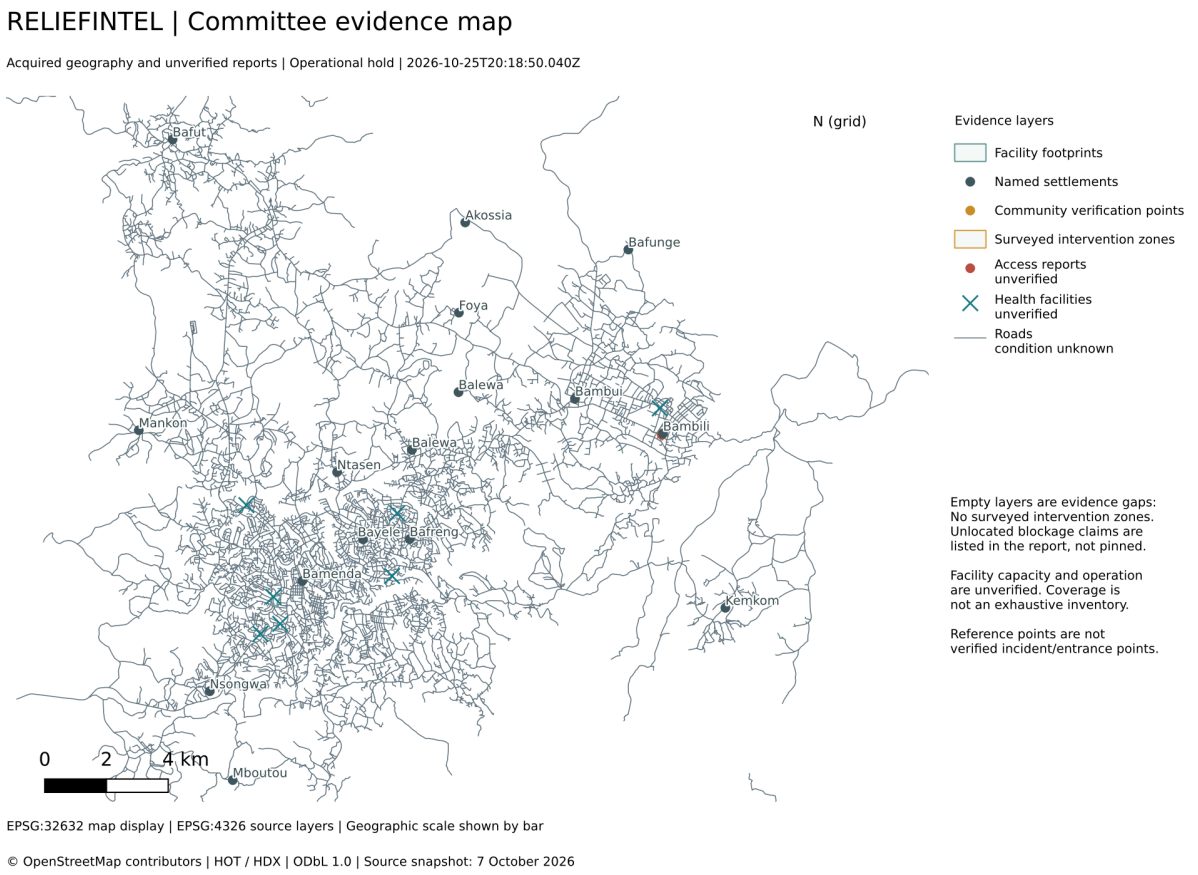

• Resolved Balewa duplicate coordinates (Action 3) [8][6][24].

Evidence trail

Mission objective [23]; map extent and coverage [20]; facility records [21][32][13][36][16][18][25]; settlement references [30][31][12][34][8][9][7][35][6][17][15][1][27][26][3][11]; community/resource context [22]; required evidence gaps [24]; generated layer inventory [19]; demonstration reports [2][14][33][4][10][29][28].

Mapped evidence and coverage

Native QGIS rendering. The scale bar applies to this reproduced map; the full-resolution map PDF and editable QGIS project are included in the pack.

Road geometry indicates mapped existence. It does not establish present passability. Blockage points require report coordinates; no point is invented for an unlocated claim. Intervention candidates are community references, not surveyed zones.

Required evidence gaps

• Facility capacity, operating hours, services and current availability require direct confirmation; mapped health features are not an exhaustive hospital inventory.

• Current road passability, exact incident locations and affected road segments are unverified. No road is certified open or impassable by this map.

• Location handling: 3 reported access observations have submitted coordinate references and are retained in the reported-access layer; 1 other access reports lack usable coordinates and are excluded. Retained points remain unverified, may be demonstrations and do not establish actual incident locations. Do not generalize the unlocated reports to every access observation.

• No surveyed intervention boundaries or approved delivery zones were supplied; the intervention_zones polygon layer is intentionally empty.

• Cargo quantities, beneficiary requirements, dispatch resources, deadlines and an authorized operator decision must be supplied before executable delivery planning.

• Demonstration reports cannot corroborate an actual incident.

• Registered stock and fleet are synthetic; their values do not establish actual NGO resources.

• Registered resource observations have expired and require a current warehouse/fleet confirmation.

• Duplicate settlement names retain multiple coordinate candidates; local clarification is required.

• signal-aa2b0db56ad1f220b5264f56c93b9fd1: reported road blockage has no usable incident coordinate; it is excluded from the blockage point layer.

Health facility reference inventory

Coordinates are WGS84 (EPSG:4326). Polygon-derived coordinates are an existing boundary vertex, not a centroid, entrance or ambulance access point. Capacity and operation remain unverified.

Mapped health feature / source	Type	Latitude	Longitude	Capacity
School's Hospital [21] Mapped point	hospital	6.0116737	10.2563897	Not reported
Doctor Azang [32] Mapped point	doctor	5.9836417	10.135345	Not reported
St Louis Clinic [13] Mapped point	clinic	5.9811709	10.1794409	Not reported
Unnamed health feature way/685675038 [36] Boundary reference	Health feature; source tag yes	5.9628119	10.1779329	Not reported
Bamenda Regional Hospital [16] Boundary reference	hospital	5.9568214	10.1431576	Not reported
Mezam Clinic [18] Mapped point	dentist	5.948886	10.1451702	Not reported
Bamenda Polyclinic [25] Boundary reference	hospital	5.9459746	10.1393738	Not reported

Named community coordinate references

Duplicate names remain separate source features. These coordinates locate mapped communities, not incidents or beneficiary boundaries.

Located access observations

Each row is a reported/unverified observation, not an independently confirmed incident. Demonstration rows are test observations. Coordinates use the submitted reference rounded to approximately 100 metres; no road-segment match or clearance is implied.

Reported access observation / source	Latitude	Longitude	Mode / status
Bambili reported access constraint [10]	6.004	10.257	DEMONSTRATION; unverified
Bambili reported access constraint [29]	6.004	10.257	DEMONSTRATION; unverified
Bambili reported access constraint [28]	6.004	10.257	DEMONSTRATION; unverified
